# MYZONE3

Wi-Fi configuration

Congratulations on purchasing a Myzone3 control system, you have one more step to complete your installation.

Please plug the Blue cable from the Wi-Fi Bridge into a LAN port on your modem and ensure you are connected to an internet connection.

Follow the registration details below at: https://myzone.air-stream.com.au/signup
We have noted the system ID for you and system type.

After registration you can now download the Myzone3 App. You will need to be logged into your Wi-Fi network to access your system.

If you would like to access your system from outside of your Wi-Fi network e.g. from your workplace, launch your App and continue to access from WWW, you will then be asked to enter your email and password. Please note any changes to the systems setpoints may take up to 2 minutes to complete.

Modem Incompatibility
While we cannot provide a definitive list of modems that Myzone 3 is compatible with, we can confirm that no Myzone App functions will work with TPG or Huawei modems "including any re-badged modems from either of these makes". Port forwarding may be required.
