Maintenance and cleaning of The Storage Box

Product Maintenance Required.

To ensure continuation of this warranty and the cabinet remains in good condition, door lock where key fits should be sprayed with WD40 or similar product twice a year and gas struts, should be kept free of dust and grime on the shaft.

The unit should be wiped regularly with a damp cloth to remove and grime or exhaust soot, (windex works quite well) Note, where the product is located in a coastal environment that might encourage corrosion, we suggest the product should be wiped/cleaned at least every 3 months.

Under no circumstances should dangerous, flammable, combustible or corrosive materials be stored in, on or within one (1) metre of the product.

The cabinet has locking nuts /adjustable feet and if the height or position is altered, Owner should ensure the cabinet is Level and the adjust locking feet adjusted correctly to ensure stability.
