The Lighting Agency Product Care Guide

Product: Riplet Pendant Light

Step-by-Step Cleaning Instructions

1. Safety First:
Ensure the light is turned off and the bulb has cooled down completely before starting the cleaning process.
Remove the bulb from the socket.

2. Dusting:
Use a soft, dry microfiber cloth or a feather duster to gently remove loose dust from the surface of the silk paper.
Be gentle to avoid tearing or damaging the delicate silk paper.

3. Cleaning the Silk Paper:
Prepare a mild cleaning solution by mixing lukewarm water and a few drops of gentle fabric cleaner or baby shampoo in a bowl.
Dampen a clean, soft cloth with the solution (ensure it is only slightly damp and not soaked).
Gently dab and wipe the silk paper with the damp cloth to remove any smudges or dirt.
Avoid scrubbing or applying too much pressure to prevent damage to the silk paper.

4. Rinsing:
Dampen another clean cloth with plain water.
Gently dab the silk paper to remove any soap residue.
Make sure no water seeps into the electrical components of the pendant light.

5. Drying:
Use a dry, soft cloth to gently pat the silk paper dry.
Allow the silk paper to air dry completely before reinstalling the bulb.

6. Cleaning the Metal Components:
If your pendant light has metal components, use a soft cloth dampened with water to wipe them down.
For polished or brushed metal finishes, avoid using abrasive cleaners or scrubbing pads to prevent scratches.
Dry the metal components immediately with a clean, dry cloth.

Additional Tips:
Avoid using harsh chemicals, abrasive materials, or excessive water, as they can damage the delicate silk paper and metal finishes.
Regularly dust your pendant light to maintain its beauty and prevent dirt buildup.
If your pendant light is difficult to reach, consider using a long-handled duster or seeking assistance from a professional cleaning service.

Enjoy the elegance and charm it brings to your space!
